ABOUT US

We are one of the leading solution providers for all kinds of Rubber and High Performance Polyurethane Products serving to most of the industries in the UAE and the Middle East. Our product quality is always appreciated by our valued customers and matches with the original equipment suppliers. We also provide better solution to the existing application in case if the original part material is not available or has become obsolete from their Equipment suppliers. We have a vast range of different grades in Rubber and Polyurethane according to which we suggest the best grade to match the quality and fit to use in required application.

RUBBER

RUBBER MOLDING

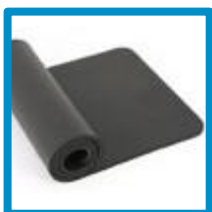

Rubber's inherent properties including excellent tensile and elongational strength, wear and tear resistance, electrical insulation, and resilience make it an ideal material to use in high volume preformed molded products for a wide range of applications. Rubber molding is defined as a process whereby an amount of uncured rubber or elastomer is transformed into a usable product. Rubber products are made from elastomers like EPDM, NATURAL, NBR, NEOPRENE, SBR, SILICON, VITON etc depending on the application.

POLYURETHANE A STRONG RESILIENT VERSATILE POLYMER

Polyurethane is very similar to a rubber unlike engineered plastic, urethane can be compounded to produce very soft parts, as low as 30A Durometer, or up to very hard, 75D Durometer. Polyurethane is ideal in high demand applications where normal rubber would fail.

Polyurethane resin is considered versatile because it can be used to produce a wide variety of industrial parts, from urethane molded bearings to urethane coated rollers. There are many advantages to polyurethane resins. They are known for their chemical, oil, and grease resistance, and are typically excellent at resisting abrasion and, as such, are not easily torn.

Features

- ▶ Abrasion Resistant
- ▶ Oil & Solvent Resistant
- ▶ Tear Resistant
- ▶ Weather Resistant
- ▶ High Tensile Strength
- ▶ Durability

METAL TRIMS & BEADING

We ISMAT showcase ourselves as a stockiest of wide variety of Trims & Profile Beadings. We offer different grades of materials according to the demands and needs of the customer. We procure all our material from reliable suppliers. Maintaining and supplying high quality goods is our key to success.

CASTER WHEELS

About Maxwell Casters

Maxwell Casters was formed to serve as a one-stop caster wheel solution provider for material handling applications. Driven by a dedication to competitive manufacturing capabilities, Maxwell Casters has quickly grown to become one of the region's most widely trusted supplier of reliable casters. Our product research and development teams work in compliance and conformity with international standards as well as regional statutory and regulatory requirements.

Injection Molding

Injection molding is a process used for mass-producing plastic components. The process is economical, reliable offering high-quality components with great consistency dimensionally. We have injection molding machine from 88 tons to 1320 tons and can produce components from 10 grams up to 7000 grams.

“Ismat Trading Company was established in 2024 to cater to the demands of the Saudi Arabian market for rubber and engineering plastic components. Since its inception, Ismat Trading has grown into a strong supplier to the oil, gas, construction, marine, and other general-purpose manufacturing industries.”
